- Bluebills Back in the Bay
- Impacts from Road Salts
- Sims Joins EPCD
- Affects of Winter on Livestock
- Pet Waste Station Project in Jefferson Co.
- Upcoming Events
- Activity Sheet

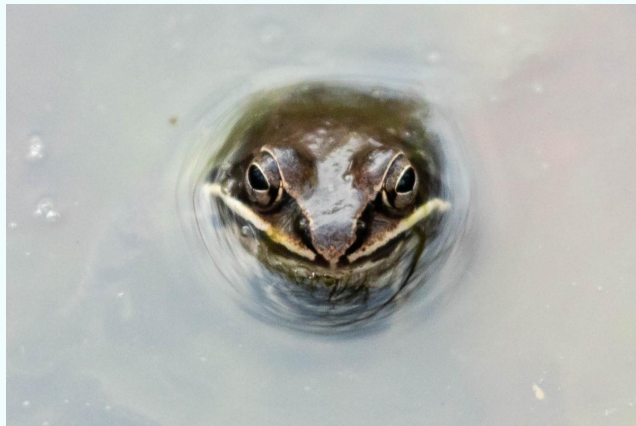

## Bluebill Ducks Visiting the Bay

Bluebills, also called lesser scaup, migrate to the Chesapeake Bay during the winter to feed on plants and insects before heading back up North in the summer to breed. These medium-sized birds have black heads with a pronounced blue bill, with males having more white-tones and the females having more brown-tones throughout their bodies. Click the link below to learn more about these interesting birds!

## The Impact from Road Salts on the Bay

Road salts have been used for many decades to help keep roadways safe in the winter time, but these chemicals can have pretty harsh and unknown impacts on the environment. Plankton, amphibians, fish, and even people can be effected by increased dissolved salts in our waters. The Potomac River alone has seen a 200% increase in salinity in the last thirty years. # The Affect of Winter Weather on Livestock

Image from Canadian Cattleman Magazine

The winter season tends to create more hassles for cooperators to deal with, but learning the statistics of grazing needs and requirements for livestock in the winter can drastically help make decisions to keep livestock healthy! Click the link below to learn more about grazing livestock in the winter!
